## Start living a relaxed and carefree life

You will be surprised over the varieties that are available to you with the solution **NETIC® Smart home**.

*Are the windows shut; is the heating on; did you unplug the iron?*

NETIC® Smart home solution enables a **comprehensive supervision** and **management** of your **home**. Despite the demanding functions offered by the solution, it is **simple to use** and **can be adjusted to your demands in needs**. The comfort of your home is no longer just a vision.

The basis of NETIC® Smart home is a **touch screen**. Its size and understandable graphic symbols allows transparency and are simple to use. All doubts regarding the complexity of its usage and the lack of transparency are entirely superfluous.

By touching the graphic symbols **you control the ambience**: heating, cooling, ventilation, lighting, and shading.

No two homes are alike. The demands for comfort, safety and economy are individual, as are humans themselves. Nevertheless, the innovative solution for home automation will meet all your requirements.

NETIC® Smart home solution allowed the possibility of **selecting** and **creating your own rules**. For example, you can create rule "Home departure" – the rule turns off the lights and selected shades, transfer heating to the efficient regime, reduces the current desired temperature from 24° C to 20° C.

### Increase your comfort by reducing the number of devices

Because of unconnected solutions you need numerous interfaces for management (an internal unit of video intercom, thermostat, a remote control for the air conditioning device, etc.), so instead of simplifying your residing, such solutions often cause confusion. NETIC® Smart home offers another simple and elegant solution. The touch screen is at the same used as **video intercom internal unit**, allows a **selection of ring tones** (music, various tones, etc.) and **unlocking of the entrance and other door**.

### With innovation to everyday security

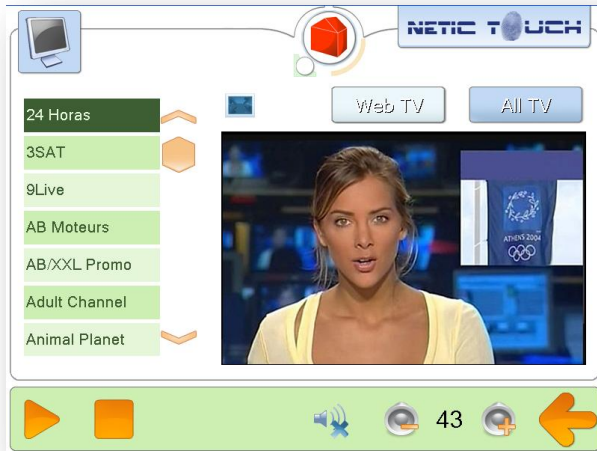

In case the alarm is triggered upon burglary or any other unforeseeable situation (e.g. water spillage, gas leakage), the solution automatically sends a text message and an email via internet connections to the desired mobile phone number or email address and/or executes a safety rule (when someone opens the door and doesn't turn off the alarm, the lights at the entrance and on the balcony turns on, touch screen plays sounds that simulate a siren, the shades open).

### Display of video contents from IP video cameras on the touch screen

Via the touch screen you can examine the activities taking place in the apartment and its surroundings (staircase, entrance door, balcony, etc.) and thus increase security and control of your home.

### Multimedia device

You can use the touch screen also for **listening** to your favourite **radio station** or **watching TV** channels.

### The touch screen as weather station

The touch screen also shows the **weather forecast for 5 days in advance**, current **outdoor temperature** and **humidity**.

All data are acquired from the Internet, so there is no need to have your own external temperature and humidity sensors. For weather forecasts you don't need to switch on your computer and browse the Web anymore.

Did it ever happen to you to leave home in a hurry and forget to close the shades or turn the cooling off? Even for such situations, there is a solution. The management of all above presented options is upgraded by a **web application** that allows you to access the management and surveillance at anytime via any device that can connect to the internet.

**Take the advantage of a comprehensive solution for your home and assure yourself a comfortable and safe stay.**
